

Movie Website System (Console App) Task

Objective

Build a simple console application to manage a movie website using C# concepts: Classes, Objects, Properties, and Constructors.

Required Classes

1) ***Class: Movie***

Represents a movie.

- Title (string)
- Genre (string)
- Year (int)
- Rating (int)

Use Properties and create a Constructor that takes all values.

2) ***Class: User***

Represents a user.

- Name (string)
- Age (int)

Use Properties and create a Constructor.

3) ***Class: Review***

Represents a user review for a movie.

- UserName (string)
- MovieTitle (string)
- Comment (string)
- Rate (int)

Main Requirements (in Main method)

- Create at least 3 Movie objects.
- Create 1 User object.
- Display all movies.
- Add at least 1 Review.
- Display all reviews.

Example Code Snippets

```
Movie m1 = new Movie("Inception", "Sci-Fi", 2010, 9);
User u1 = new User("Ali", 25);
Review r1 = new Review("Ali", "Inception", "Great movie!", 10);
```

Bonus (Optional)

- Validate Rating (must be between 1 and 10).
- Default rating = 5 if not provided.
- Display a welcome message when a User is created.

Expected Output Example

Welcome Ali!

Movies:
Inception - 9
Titanic - 8

Reviews:
Ali rated Inception: 10 - Great movie!
